

# Smith College Campus Center: Skylight Project

## **Project:**

Smith College Campus Center  
Northampton, MA

## **Architect:**

Weiss/Manfredi Architects  
New York, NY

## **Contractor:**

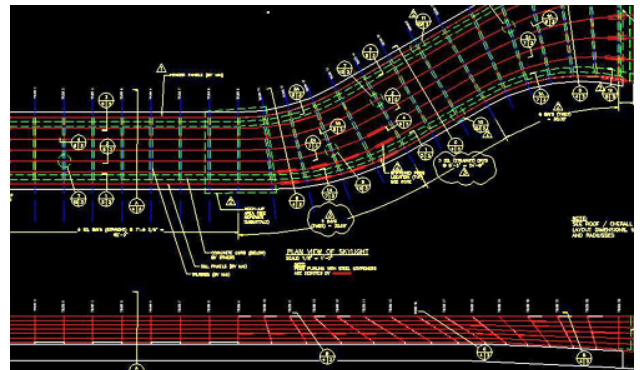

Daniel O'Connell's Sons  
Holyoke, MA

## **Project Summary:**

The skylights at the Smith College Campus Center utilize complex twisting frames designed and engineered by AGT to make the flat-glass panels appear to curve and bend.

Each piece of the support system features custom tapered channels that allow the frame to twist, essentially creating a free-form skylight.

AGT's expertise in advanced non-planar geometry and creative problem solving helped to meet the design criteria of the architect while staying within the budget of the owner.
